

Scientific and Production Association «NPO EIR» offers unique cutting-edge products and reagents for instant elimination of all unpleasant odors, as well as water disinfection in the systems of drinking and industrial water supply, for treatment and disinfection of wastewater treatment plants, in the production of food, for livestock farms, farms and fisheries, slaughterhouses and cattle cemeteries, disinfection of crowded places and processing of solid and porous surfaces, cleaning of water bodies and soils from oil spills petroleum products, the removal of organic contaminants for disposal of any biological and organic waste.

Thanks to the development of the scientific and technical process and the growth of the world's population, the modern world is faced with the global problem of recycling and recycling human waste. Billions of cubic meters of sewage are discharged into rivers, millions of tons of household waste poison the air of nearby settlements.

Bio-Accelerator BIUS

Bio-Accelerator BIUS is developed on the basis of unique technologies for creating "functional" mixtures. The drug is made from vitamins, microelements and natural enzyme proteins with the formation of a hybrid compound, which simultaneously has the properties of surface modification (emulsification), changes in the physical parameters of dissolved air, aggregation of surfactants and catalytic properties of enzymes. Bio-Accelerator BIUS does not contain microorganisms and is not bacteria.

Bio-Accelerator BIUS decomposes organic pollution in combination with natural biological processes to simple compounds and combinations, but in a very accelerated manner. Bio-Accelerator BIUS reduces the need for the necessary energy for chemical and biological reactions, which facilitates and accelerates their flow. And as a result, it instantly removes odors on litter and dung lagoons, silt maps, from solid surfaces, on solid waste landfills. Cleans work surfaces and drains from fats, oils and any petroleum products.

Bio-Accelerator BIUS was tested by independent research laboratories and showed that it is non-toxic and safe for humans, animals, plants, and marine organisms.
